

## GROUP II: HOUNDS

# RHODESIAN RIDGEBACK

RECOGNIZED: 1949

Effective: January 2004

*The breed standard outlines the ideal characteristics, temperament and appearance of a breed, and ensures that a dog can carry out its original purpose. Breeders and judges should be mindful to prioritize dogs that are healthy and sound in both mind and body.*

### GENERAL APPEARANCE

The Ridgeback should represent a strong muscular and active dog, symmetrical in outline, and capable of great endurance with a fair amount of speed.

The peculiarity of this breed is the ridge on the back, which is formed by the hair growing in the opposite direction to the rest of the coat. The ridge must be regarded as the escutcheon of the breed. The ridge should be clearly defined, tapering and symmetrical. It should start immediately behind the shoulders and continue up to a point between the prominence of the hips (haunch bones) and should contain two identical crowns opposite each other. The lower edges of the crown should not extend further down the ridge than one-third of the ridge.

### SIZE

A mature Ridgeback should be a handsome, upstanding dog. Dogs should be of a height of 63.5 to 68.5 cm (25 to 27 in), and bitches, 61 to 66 cm (24 to 26 in). Minimum bench standard: Dogs, 63.5 cm (25 in); bitches, 61 cm (24 in). Weight (desirable): Dogs, 34 kg (75 lb); bitches, 29.5 kg (65 lb).

### COAT

The coat should be short and dense, sleek and glossy in appearance, but neither woolly nor silky.

### COLOUR

Light wheaten to red wheaten. A little white on the chest and toes permissible, but excessive white here and on the belly and above paws is undesirable.

### HEAD

The head should be of a fair length, and **skull** flat and rather broad between the ears and should be free from wrinkles when in repose. The **stop** should be reasonably well defined, and not in one straight line from the nose to the occiput bone, as required in a Bull Terrier. The **muzzle** should be long, deep, and powerful. **Jaws** level and strong with well-developed teeth, especially the canines or holders. The lips clean, closely fitting the jaws. The **nose** should be black, or brown, in keeping with the colour of the eyes. No other coloured nose is permissible. A black nose should be accompanied by dark eyes, a brown nose by amber eyes. The **eyes** should be moderately well apart, and should be round, bright, and sparkling, with intelligent expression, their colour harmonizing with the colour of the nose. The **ears** should be set rather high, of medium size, rather wide at the base, and tapering to a rounded point. They should be carried close to the head.

### NECK

The neck should be fairly strong and free from throatiness.

## FOREQUARTERS

The *shoulder* should be sloping, clean and muscular, denoting speed. The *forelegs* should be perfectly straight, strong and heavy in bone; *elbows* close to the body. The *feet* should be compact, with well-arched toes, round, tough, elastic pads, protected by hair between the toes and pads.

## BODY

The *chest* should not be too wide, but very deep and capacious; *ribs* moderately well sprung, never rounded like barrel hoops (which would indicate want of speed), the *back* powerful, and *loins* strong, muscular and slightly arched.

## HINDQUARTERS

In the hind legs the muscles should be clean, well defined, and *hocks* well down.

## TAIL

The tail should be strong at the insertion, and generally tapering towards the end, free from coarseness. It should not be inserted too high or too low, and should be carried with a slight curve upwards, never curled.

## FAULTS

Any departure from the aforementioned ideals shall be considered faulty to the degree in which it interferes with the health and well-being of the dog and the breed's traditional purpose.

## SCALE OF POINTS

Ridge .....	20
Head .....	15
Neck and shoulders.....	10
Body, back, chest, loins.....	10
Legs and feet.....	15
Coat.....	5
Tail.....	5
