

10% Treat Allocation Calculator

Treats are an important part of the relationship you have with your pet, but it's important to make sure you keep the amount of treats you give within **10% of their daily energy requirements**. If your pet is maintaining a healthy weight, use the tool below to find out how many treats you can give:

a) Pet's **daily** dietary energy requirements: _____ kcal/day* 

b) Pet's daily calorie allocation from food (when giving treats): _____ kcal/day*

c) Pet's daily **10%** calorie allocation from treats: _____ kcal/day*

How many treats can I give?

1) Energy density per treat _____ kcal/treat

2) Number of chosen treats that you can give: _____*

Don't forget that when you feed your pet treats, you also have to adjust how much of their regular food you feed to help avoid excess calorie consumption.

Don't know what your pet's **daily dietary energy requirements** are? Talk to your veterinarian or follow the steps below to get an approximate amount from your pet's Royal Canin food package:

- i)** Daily feeding amount from your pet's food bag based on their age, weight and/or activity level: _____ g
- ii)** Energy density of food listed on the bag: _____ kcal/kg
- iii)** Pet's daily dietary energy requirements: _____ kcal/day*

* This is only an estimate. Energy needs can vary between individuals.
